Enterprise Workforce AI Platform

Implementation Plan & Complete Development Prompts Log

Document Date: July 7, 2026 **Repository:** <https://github.com/Aditya-Khatri-7/enterprise-workforce-ai-platform>

PART A: IMPLEMENTATION PLAN

1. Project Vision & Current State Summary

The Enterprise Workforce AI Platform is a MERN-stack application (~70% complete) covering 15 functional modules. The platform already ships with:

- ✓ Secure JWT authentication with OTP password reset
- ✓ Multi-tenant organization management
- ✓ Full employee lifecycle management
- ✓ Leave request workflow
- ✓ Help desk ticketing
- ✓ Project assignment + team lead/employee acceptance flows
- ✓ Department manager dashboard with grievance management
- ✓ Employee rating system (Team Lead + Dept Manager)
- ✓ Finance payroll entry + salary hold
- ✓ Recruitment backend
- ✓ Asset management backend
- ✓ Office location & work shift configuration
- ✓ AI chat assistant (backend + widget)

- ✓ Demo Mode + Guided Tour showcase

What remains: Full attendance UI, payroll PDF, recruitment frontend, performance KPIs, document vault, complete notifications, and production hardening.

2. Implementation Phases

PHASE 1: Critical Bug Fixes & Stability (Immediate — Week 1)

Priority: 🚨 CRITICAL — Must complete before any demo or submission

1.1 Fix Null Designation Crash in AdminDashboard.jsx

Problem: When an employee record has no designation, `e.designation.toLowerCase().includes('manager')` throws a fatal `TypeError`, crashing the Super Admin and Organization Admin dashboards with a blank screen.

Fix:

```
// BEFORE (line ~800 in AdminDashboard.jsx - stat calculation):
const managers = employees.filter(e => e.designation.toLowerCase().includes('manager'));

// AFTER:
const managers = employees.filter(e => e.designation?.toLowerCase().includes('manager'));
```

Files to modify: - `frontend/src/pages/AdminDashboard.jsx` — Wrap all `.designation`, `.department`, `.role` accesses with optional chaining (`?.`)

1.2 Fix Finance Dashboard Crash on Missing `salaryHold`

Problem: Older payroll records saved before the `salaryHold` field was added cause `TypeError` when the Finance dashboard tries to read `record.salaryHold.isOnHold`.

Fix:

```
// Use optional chaining everywhere salaryHold is accessed
const heldRecords = payrolls.filter(p => p.salaryHold?.isOnHold === true);
```

Files to modify: - `frontend/src/pages/AdminDashboard.jsx` — Finance dashboard section

1.3 Refactor AdminDashboard.jsx (272KB → Componentized)

Problem: The entire multi-role dashboard is a single 272KB JSX file, making it difficult to maintain, debug, and test.

Proposed split:

```
frontend/src/pages/dashboards/
├── SuperAdminDashboard.jsx    (~25KB)
├── OrgAdminDashboard.jsx      (~30KB)
├── HRDashboard.jsx            (~25KB)
├── FinanceDashboard.jsx        (~20KB)
├── ITAdminDashboard.jsx        (~15KB)
├── AuditorDashboard.jsx        (~10KB)
└── DepartmentManagerDashboard.jsx (~20KB)
```

The parent `AdminDashboard.jsx` becomes a thin role-router that lazy-loads each sub-dashboard.

PHASE 2: Attendance Management (Week 2-3)

Module ID: M-05 | Priority: 🟡 HIGH

2.1 Backend (Already Exists — Verify & Extend)

Verify `attendanceController.js` implements: - `clockIn(req, res)` — Record start time, GPS coordinates - `clockOut(req, res)` — Record end time, calculate hours worked - `getMyAttendance(req, res)` — Employee's own attendance history - `getTeamAttendance(req, res)` — Team lead sees team attendance - `requestCorrection(req, res)` — Submit an attendance correction - `approveCorrection(req, res)` — Manager/HR approves correction

2.2 New Frontend Components

[NEW] `EmployeeAttendance.jsx` - Clock In / Clock Out button with live timer - Today's attendance status (Present/Absent/Late) - This month's attendance calendar view (color-coded) - Attendance correction request form - Attendance history table with pagination

[MODIFY] `App.jsx` - Add route: `/employee/attendance` → `EmployeeAttendance.jsx`

[MODIFY] `DashboardLayout.jsx` - Add "Attendance" to employee sidebar

[NEW] `HRAttendanceManager.jsx` (or section in `HRDashboard`) - Department-wise attendance overview - Flag late arrivals / early exits - Approve/reject correction requests - Export monthly attendance report (CSV)

PHASE 3: Recruitment Frontend (Week 3-4)

Module ID: M-04 | Priority: 🟡 MEDIUM-HIGH

The backend (`recruitmentController.js` — 7.5KB) is complete. The frontend needs to be built.

3.1 New Frontend Pages

[NEW] `RecruitmentDashboard.jsx` - Job Postings board: Create/Edit/Close job postings - Candidate pipeline Kanban: Applied → Screened → Interview → Offer → Hired/Rejected - Metrics: Total applied, interview scheduled, offers extended, conversion rate

[NEW] `CandidateDetail.jsx` - Full candidate profile view - Resume viewer (parsed text or uploaded file) - Interview scheduling form - Feedback submission (after each interview round) - Status update controls

[MODIFY] `App.jsx` - Add routes: `/admin/recruitment`, `/admin/recruitment/:id`

[MODIFY] `DashboardLayout.jsx` - Add "Recruitment" to HR Manager and Org Admin sidebar

3.2 AI Resume Analysis Integration

- When a candidate's resume is uploaded, call `/api/ai` with the resume text
 - Display AI-generated skill score, matched skills, and missing skills
 - Add a "AI Analysis" section to `CandidateDetail.jsx`
-

PHASE 4: Payroll Enhancement — PDF Payslips (Week 4)

Module ID: M-07 | Priority: 🟡 MEDIUM

4.1 Backend PDF Generation

[MODIFY] `payrollController.js` - Add `generatePayslip(req, res)` function - Use a PDF library (e.g., `pdfkit` or `puppeteer`) to generate a payslip PDF - Include: Employee name, ID, department, month/year, base salary, allowances, deductions, net salary, company header

[MODIFY] `backend/package.json` - Add `pdfkit` dependency

[MODIFY] `routes/payroll.js` - Add route: `GET /:id/payslip` → protected to Employee (own) and Finance

4.2 Frontend Payslip Download

[MODIFY] `EmployeeDashboard.jsx` or new `EmployeePayslips.jsx` - List of monthly payslips with download button - Clicking “Download” calls `/api/payroll/:id/payslip` and triggers browser download

PHASE 5: Performance Management (Week 5)

Module ID: M-08 | Priority: 🟡 MEDIUM

5.1 Backend

[NEW] `performanceController.js` - `createReview(req, res)` — Manager creates periodic performance review - `getMyReviews(req, res)` — Employee views their reviews - `getDeptReviews(req, res)` — Manager views all dept reviews

[MODIFY] `routes/performance.js` (new file) - `POST /api/performance` — Create review - `GET /api/performance` — List reviews - `PUT /api/performance/:id` — Update review

5.2 Frontend

[NEW] `PerformanceReviews.jsx` - Goal setting section (employee sets goals, manager approves) - KPI tracking table with progress indicators - Quarterly review form (for managers) - Performance trend chart over quarters (Recharts)

[MODIFY] `EmployeeCompanyInfo.jsx` - Already shows cumulative ratings — extend with review history

PHASE 6: Document Management Vault (Week 5-6)

Module ID: M-12 | Priority: 🟡 MEDIUM

6.1 Backend

[NEW] `documentController.js` - `uploadDocument(req, res)` — Accept base64 or file upload, store in MongoDB or Cloudinary - `getDocuments(req, res)` — List employee’s documents - `deleteDocument(req, res)` — Remove document

Document types: Aadhaar, PAN, Resume, Offer Letter, Certificates, Photograph

6.2 Frontend

[NEW] `EmployeeDocuments.jsx` - Document vault UI with category tabs - Upload area (drag-and-drop) - Preview for images; download link for PDFs - Admin/HR can view employee documents with permission

PHASE 7: Complete Notifications System (Week 6)

Module ID: M-13 | Priority: 🟡 MEDIUM

7.1 Backend (Already Partial)

- `notificationController.js` exists (1.6KB) — extend it
- Trigger notifications on key events: leave approval, project assignment, salary processed, grievance resolved

7.2 Frontend Notification Bell

[MODIFY] DashboardLayout.jsx - Add notification bell icon in header - Fetch unread notifications from /api/notifications - Badge count for unread - Dropdown list with mark-as-read functionality - Socket.IO listener for real-time push

PHASE 8: Reports & Analytics Enhancement (Week 7)

Module ID: M-14 | **Priority:**  LOW-MEDIUM

8.1 New Report Endpoints

- **GET /api/enterprise/reports/headcount** — Headcount by dept/designation
- **GET /api/enterprise/reports/attrition** — Terminations over time
- **GET /api/enterprise/reports/attendance-summary** — Monthly attendance %
- **GET /api/enterprise/reports/payroll-summary** — Monthly payroll totals

8.2 Analytics Dashboard

[NEW] AnalyticsDashboard.jsx - Headcount trend chart - Department distribution pie chart - Leave utilization bar chart - Attendance heatmap calendar - CSV export button for each report

PHASE 9: Production Hardening (Week 7-8)

Priority:  HIGH (before any production deployment)

9.1 Backend

- ☐ Add **express-validator** for all input validation
- ☐ Add Mongoose query projection to exclude sensitive fields by default
- ☐ Implement proper logging with Winston or Morgan
- ☐ Add CSRF protection tokens
- ☐ Configure MongoDB Atlas connection pooling
- ☐ Add health check endpoint: **GET /api/health**

9.2 Frontend

- ☐ Implement proper error boundaries in React
- ☐ Add loading skeletons for all data-fetching components
- ☐ Implement mobile responsive layouts (media queries)
- ☐ Lighthouse performance optimization
- ☐ SEO meta tags on all public pages

9.3 Testing

- ☐ Unit tests for all controllers (Jest)
- ☐ Integration tests for auth flow (Supertest)
- ☐ E2E tests for critical flows: login, leave request, project assignment (Playwright or Cypress)

3. Priority Matrix

Phase	Module	Priority	Effort	Owner Role
1 — Bug Fixes	Stability	 Critical	1-2 days	All Frontend
2 — Attendance	M-05	 High	1 week	Full-stack
3 — Recruitment	M-04	 Medium-High	1 week	Frontend
4 — Payslip PDF	M-07	 Medium	3 days	Backend

5 — Performance	M-08	● Medium	4 days	Full-stack
6 — Documents	M-12	● Medium	3 days	Full-stack
7 — Notifications	M-13	● Medium	3 days	Full-stack
8 — Analytics	M-14	● Lower	3 days	Frontend
9 — Hardening	Production	● High	1 week	All

4. Verification Plan

After Each Phase

1. Run `cd frontend && npm run build` — zero compilation errors required
2. Start both servers and verify all existing login flows still work
3. Test new feature in both live mode (with MongoDB) and Demo Mode

Regression Test Checklist (run after every major change)

- ☐ Super Admin can log in and see the admin dashboard
- ☐ Organization Admin can create departments, designations, office locations
- ☐ HR Manager can add/edit employees and approve leaves
- ☐ Department Manager can view team leads and resolve grievances
- ☐ Team Lead can view their team and rate employees
- ☐ Employee can apply for leave, submit tickets, view projects
- ☐ Finance can add payroll entries and place salary holds
- ☐ Demo Mode works without backend running

PART B: ORIGINAL DEVELOPMENT PROMPTS (VERBATIM)

The following are the **exact, original prompts** typed during the development sessions of this platform. Spelling, grammar, and formatting are preserved **exactly as written** in `prompts.txt`.

Prompt 1

Time: 9:51 AM

Both servers are currently running and fully connected to the database:

Frontend Client: `http://localhost:5173/`
Backend Server: `http://localhost:3000/` (Successfully connected to MongoDB)
If you need to restart or rebuild them at any point, let me know!

Prompt 2

Time: 10:12 AM

Continue

Prompt 3

Time: 12:20 PM

hey now push over git hub fast

Prompt 4

Time: 12:35 PM

see here its showing navigating to workflow but nothing is showing up for hr how hr can do things when nothing is showing up and also in records how can hr have option to suspend himself how this is possible follow hierarchy

super admin have every things keep it as it is
org admin can see all employees and can do deactivate , suspend , delete now HR and dept manager suspension should be in admin hand only
hr manager should be able to accept request leave approval , suspension , activation , request or any change by employees , and see records and those actions anyone except himself and admins

now department manager is handling how work is being done by team leads and employees manage projects and all those works that a department manager do accepting team lead change and employee project unselect and select requests (if employee want to change his project)
and all such things rating employees in the department ok

team lead should be able to work with employees and projects and progress, all that work what its doing but should not be able to suspend anyone or any such things which admins org admin or hr can do

everyone can see records of person working in company but who can do actions with records that i have told you now finance one can do all work related to finance and auditors can do all work they should do , also auditors should be visible to org admin as well,

i have added the image where you can see all stakeholders in we have

Prompt 5

hey what every you have shown in dashboard where an employee can raise a service ticket that very fine but how he can see its status of tickets and of leave they are showing but how to see status of them add section on side bar of all these things ok clicking on side bar page can show up ok service ticket then another page and option for leave status and team lead change request and project change request you know what i mean so now do it and also you are office expert and ceo of mnc so you can guess your self you are responsible ;who can see employee requests and accept or approve them or solve them like that also while creating department by admin we can create a department with dept code but whom are we assigning that department (there is no employee list to select from which department can be given to whom no employee list is showing up which create department)see for department manager we should have department its not like one person handling all departments ok ;handling departments is done by admin he will manage or delete or accept request all those sort of work (department management , employee deletion , hr change , or changing the designation of any employee ; but for department manager they will handle their department team leads and project reports and project handling (giving project or transferring project to someone else ,managing team lead , handling employee plea that came directly to department manager , approving employee leaves as well rating employee after team lead report of team members) like this

Prompt 6

admin dashboard is not working and did you completed all functionalities like department manager is able to make all projects and tell team leads (i mean assign team leads their work and also like team lead in their dashboards can see projects after accepting it and forward the details to employees and employee can accept that under hr there would be multiple employees even department managers and team leads and employees

also employee can reject to work in the project individually and also add ssuch thing that under a team lead if emplyooee dont want to work with the team lead then under the same team ,emplyoeess with 2/3 majority can change the team lead and sent a request to department about the new team lead and department can approve it

also add section in side bar about tema leads and requests , approvals
also greivience section whre department manager can see employee greiveince

also in side bar add more functionalities instaed of just addin things in dashboards dashboards should show everything but side bar shhuold be overlooked add things their as well for emplyoee like in dashboards should show what ever showing here but also in side bar sections made for specific actions like projects , log of projects history what emplyoee had done , also a section of waht info is with company : resume (resume edit option should also be their , uplaod option) , emplyoee rating options should also be thier which should be cumulative after rating given by team lead and department manager

their are many departments you can check how many ok antigravity
so apply your office mind you are and have been ceo of multiple mncs and know how office system works and you are building and adding functionalites in this system

check everythings and run the local host in ms edge and give me local host link also check for admin log in and every person log in who every is in actual data base and keep in mind dont show fake data when we signed in and working ; demo datas is only for demo purposes ok check every funcitons and buttons and login they are working or not

Prompt 7

who said in admin dashboard opened offices how can one add info about open officies who is in charge of editing this infor and other similar infos in dashboards

Prompt 8

for the finance dashboard how to enter things how to enter things so that dashboards should get updated what ever is shown in dashboards of finance that things can be editable so that htey can be shown in dashboards screen

Prompt Summary Table

#	Time	Key Topic	Core Ask
1	9:51 AM	Server status	Both servers confirmed running, MongoDB connected
2	10:12 AM	Continue	Resume work
3	12:20 PM	GitHub push	Push all changes to GitHub immediately
4	12:35 PM	RBAC hierarchy	Who can suspend/deactivate/delete; full role permission rules
5	—	Employee sidebar + Dept Mgr	Ticket/leave/TL/project status sidebar pages; dept mgr handles own dept only
6	—	Dashboard broken + feature expansion	Fix admin dashboard; project workflow; 2/3 TL vote; resume upload; ratings; real DB only

7	—	Office info edit ownership	Who edits open office info in admin dashboard
8	—	Finance dashboard editability	How to enter data so finance dashboard KPIs update live

Document compiled: July 7, 2026 | Enterprise Workforce AI Platform Repository: <https://github.com/Aditya-Khatri-7/enterprise-workforce-ai-platform>
